Professional Summary

Founding Engineer with experience building and scaling a fintech platform from 0 to 7,500+ users. Led architecture, development, and operations of a production system spanning Open Banking, payments, rewards, and cloud infrastructure.

Strong focus on reliability, real-money transaction systems, and delivering high-impact features in early-stage environments.

Technical Skills

Languages & Front End	JavaScript (ES6+), SQL, React.js, React Native, Redux, HTML, CSS
Backend	Redux, Redux Toolkit, Context API
Databases	PostgreSQL, MongoDB, Redis, Supabase
Payments & Integrations	Open Banking (TrueLayer), Tillo, Firebase, GoCardless
Cloud & DevOps	AWS (EC2, RDS, ALB, WAF), CI/CD (GitLab), PM2, Linux
Ways of Working	Agile, Scrum, cross-functional collaboration, code reviews
AI & Productivity	Leverage AI tools for development, debugging, and system design

Professional Experience

Founding Engineer – SuperFi (UK-based team, remote)

Oct 2024 – Present

- Built and scaled a fintech platform from 0 to 7,500+ users and 500+ MAU
- Architected and developed the full product stack across frontend, backend, and AWS infrastructure
- Implemented Open Banking integrations and real-money payment flows (TrueLayer)
- Designed and built cashback and voucher systems (Tillo), including purchase flows and reward logic
- Owned production infrastructure (EC2, RDS, ALB, WAF), ensuring high availability and security
- Built core backend systems handling payments, financial data, and user workflows
- Processed real-money transactions with production-grade reliability and safeguards
- Implemented fraud prevention and validation layers to reduce risk and improve transaction success
- Set up CI/CD pipelines (GitLab) and managed deployments via PM2
- Worked closely with product on system design, feature development, and roadmap decisions

- Built scalable applications across backend, frontend, and database layers
- Developed APIs and user interfaces using Node.js, React, PostgreSQL, MongoDB, and AWS
- Progressed into a leadership role managing a team of 6–7 engineers
- Owned system design, technical decisions, and end-to-end feature delivery across project

Key Highlights

- 6+ years of experience building backend systems and full stack applications in production environments
- Strong experience working with financial data, real-money transaction systems, and payment integrations
- Deep understanding of API design, system architecture, and scalable backend development using Node.js
- Hands-on experience with PostgreSQL and MongoDB, including schema design and performance optimisation
- Experience designing and operating cloud-based systems on AWS (EC2, RDS, ALB, WAF)
- Strong focus on reliability, validation, and edge-case handling in production systems
- Experience working with third-party integrations and external APIs in high-dependency environments
- Comfortable working across frontend, backend, and infrastructure in fast-paced, early-stage setups
- Strong debugging skills with ability to identify and resolve complex production issues
- Actively leverage AI tools (ChatGPT, Copilot, Claude) to improve development speed and problem-solving efficiency

Education

Master of Science (MS), Electrical Engineering

Cleveland State University · 2016 – 2018

Bachelor of Technology (B. Tech), Electronics and Communications Engineering

Symbiosis Institute of Technology · 2012 – 2016
